Suggestions for the Care and Cleaning of your Elkay Stainless Steel Sink

RECOMMENDED CLEANSERS
Elkay has tested general household cleansers to measure their effectiveness in cleaning stainless steel sinks. The most aggressive cleansers consist of Bar Keeper's Friend, Zud and Lawrence Right. Other cleansers, which are still effective, but less aggressive include Ajax, Comet, Shiny Sinks Plus, Luneta, Soft Scrub, Mr. Clean, Maas and Flitz. For everyday cleaning we recommend using Elkay's Stainless Butler Stainless Steel Cleaner + Polisher. The non-abrasive formula is safe and effective for day to day cleaning. So to help maintain the beautiful finish of your stainless steel sink, use one of the cleansers that Elkay recommends.

RECOMMENDATIONS FOR PROPER MAINTENANCE
• Do... Rinse thoroughly after each use. “Thorough” rinsing can be done by running water for a few minutes and rubbing the cleaned area with a clean sponge.
• Do... Towel dry after each use to prevent mineral deposits from building up on the surface of the sink.
• Do... Clean the sink once a week, being sure to rub in the direction of the satin finish grain lines, using an Elkay recommended cleaner.
• Do... Use an Elkay bottom grid or rinsing basket to “protect” the finish. Bottom grids and rinsing baskets can remain in the sink and will not cause rusting or pitting.
• Do Not... Rub the sink across the satin finish lines. Scouring across the satin finish lines can damage the original sink finish.
• Do Not... Allow soap or other household cleansers to dry on the surface of the sink. Most brands contain chemical additives which will affect the original finish.
• Do Not... Use solutions of chlorine bleach and water in the sink. Chlorides, which are found in most soaps, detergents, bleaches, and cleansers, are very aggressive to stainless steel. If left on the sink too long they can cause surface pitting.
• Do Not... Use a steel wool pad to clean a sink. If a more abrasive product is needed, use a green Scotch Brite pad being sure to rub in the direction of the satin finish grain lines. Steel wool pads have a tendency to break apart and small particles of steel can become embedded in the surface of the sink. The steel particles will rust and will give the appearance that the sink itself is rusting.
